

Can Medrol Dose Pack Cause Night Sweats

Medrol Dose Pack is a corticosteroid medication used to treat various inflammatory conditions. While it is effective, it can cause side effects, including night sweats.

Night sweats are a common side effect of Medrol Dose Pack, especially during the first few days of treatment. They are caused by the hormone's effect on the body's temperature regulation.

Other side effects of Medrol Dose Pack include increased appetite, weight gain, and mood changes. It is important to monitor these symptoms and consult a doctor if they become severe.

Medrol Dose Pack is a powerful medication, and it is essential to follow the doctor's instructions carefully. It should be taken exactly as prescribed, and the full course should be completed.
