

Febrex Plus Tablet In Pregnancy

Febrex Plus Tablet is a combination of Paracetamol and Codeine, used for pain relief and fever reduction. It is important to consult a healthcare provider before using this medication during pregnancy, as it may have effects on the fetus and the mother. The following information is for informational purposes only and should not be used as a substitute for professional medical advice.

Key Points:

- Consultation:** Always consult your doctor or pharmacist before taking Febrex Plus Tablet during pregnancy.
- Dosage:** Follow the recommended dosage and duration of treatment as advised by your healthcare provider.
- Side Effects:** Common side effects include drowsiness, constipation, and nausea. Seek medical attention if you experience severe side effects.
- Contraindications:** Do not use Febrex Plus Tablet if you are allergic to Paracetamol or Codeine, or if you have a history of liver or kidney disease.
- Precautions:** Avoid alcohol consumption while taking this medication, as it may increase the risk of side effects.
- Monitoring:** Your doctor may monitor your health and the health of your fetus during treatment.

Conclusion: Febrex Plus Tablet can be used for pain relief and fever reduction during pregnancy, but it must be used under the supervision of a healthcare provider. Always follow the instructions and warnings provided with the medication.
