

Propranolol Bez Recepty Apteka

Propranolol is a beta-blocker used to treat high blood pressure, chest pain, and heart problems. It is available in tablet and capsule form. The generic name is Propranolol, and the brand name is Inderal. It is a non-selective beta-blocker, meaning it blocks both beta-1 and beta-2 receptors. It is used to prevent and treat angina, to control blood pressure, and to prevent migraine attacks. It is also used to treat tremor and to prevent the effects of stress on the heart. The drug is contraindicated in patients with asthma, heart failure, and bradycardia. It should be used with caution in patients with diabetes and peripheral vascular disease. The drug is metabolized in the liver and excreted in the urine. The half-life is approximately 12 hours. The drug is available in 10 mg, 20 mg, and 40 mg tablets and capsules. The recommended dose is 10-40 mg twice daily. The drug is available without a prescription in some countries, but it is important to consult a doctor before taking it.
