Silene acaulis L. (Caryophyllaceae) is a perennial herb with a thick, horizontal, woody rootstock from which several upright, branched stems arise. The leaves are small, opposite, and linear-lanceolate. The flowers are small, white, and numerous, arranged in dense, terminal cymes. The fruit is a small, rounded capsule. It is native to the mountains of the Alps and Pyrenees, and is also found in the mountains of the Himalayas and the Andes. It is a common plant in the mountains of the Alps and Pyrenees, and is also found in the mountains of the Himalayas and the Andes. It is a common plant in the mountains of the Alps and Pyrenees, and is also found in the mountains of the Himalayas and the Andes.
