troxyphenylphosphonate) was synthesized by the following procedure. To a solution of 10 g (0.06 mol) of 2-chloro-4-nitrophenol in 100 mL of dry THF at 0 °C were added 1.8 g (0.07 mol) of sodium hydride and 1.9 g (0.07 mol) of 18-crown-6. The mixture was stirred for 1 h and then 10 g (0.06 mol) of diethyl phosphite chloride was added. The reaction mixture was stirred at room temperature for 24 h, poured into water, and extracted with ethyl acetate. The combined organic layers were washed with water, dried over anhydrous magnesium sulfate, and concentrated under reduced pressure. The residue was purified by column chromatography (silica gel, hexane/ethyl acetate = 1/1) to give 10 g (60%) of pure compound as a white solid. mp 100–101 °C.
